

# SATA Aviation Snips

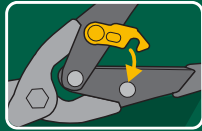

UNLEASH EFFICIENCY AND CUTTING POWER

Experience enhanced metal cutting performance with SATA's new aviation snips, offering three specialized versions for straight lines, left arcs, and right arcs to meet your precise requirements.

SATA aviation snips are engineered to effortlessly cut through 1.2mm cold-rolled iron plates and 0.8 mm stainless steel plates. Their double-leverage design ensures exceptional cutting power, regardless of your choice between straight lines, left arcs, or right arcs. Designed with durability and efficiency in mind, the snips feature a robust pivot bolt design for longer shear life, serrated blades for cleaner cuts, and an auto-release latch for convenient single handed latch opening. The color-coded non-slip grips help to easily identify the snip for the corresponding cutting direction. Furthermore, the handles feature optimized hand & finger contact points, enhancing fit, control, and user ergonomics.

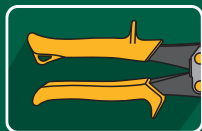

Cuts up to 1.2 mm cold-rolled iron plate

Auto-release latch

Serrated blades for cleaner cuts

Optimized hand & finger contact points
