MADE TO CHALLENGE™

# BOLTBITER™

## Firmly Grips any Rusted or Rounded Fastener

Struggling with a rusted, rounded or stripped screw head? SATA BoltBiter fastener extraction tools are the solution. SATA BoltBiter makes your life easier by redefining fastener extraction - reliably removing stubborn nuts and bolts. Unique fastener gripping technology extends the lifespan of the sockets compared to traditional fastener cutters.

**BoltBiter - the innovative extraction socket system from SATA!**

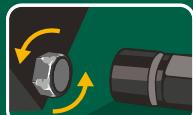

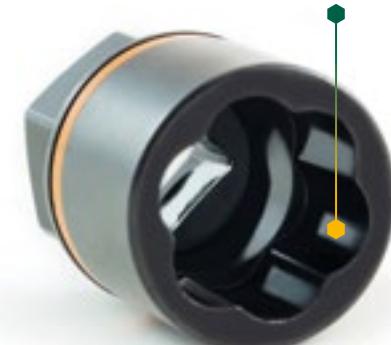

Hexagonal base for use with impact guns, ratchets, wrenches or pliers

Innovative tapered flutes for easy seating onto a damaged fastener

Bi-directional design removes or tightens damaged fasteners

Dual sized sockets work with both SAE and metric fasteners

Removes rusted and rounded fasteners

Black oxide finish to resist corrosion

## Durability and Fastener Re-Use

The bi-directional design means the BoltBiter can tighten any fastener just as easily as it can remove it. The ability to re-use a damaged fastener makes the BoltBiter the perfect tool for specialized components. Innovative tapered flute openings allow the socket to easily connect with the fastener, eliminating the need for a striking tool and reducing jamming in the socket compared to traditional extraction. Minus-sized sockets fit a wide range of damaged fasteners.
